## WORK EXPERIENCE

### Front End Developer

Avanade | August 2021 - Present

- Worked with an agile team to rapidly develop a couple of mobile demo applications. For cross-platform development we used React Native. I was responsible for creating a navigation system, developing new pages using native features, and making sure our app functionality worked on iOS.
- Created new experiences for an Angular project that required working with Material UI, GET / POST requests, implementing sitewide translation, and refactoring existing components so functionality with new translations is not lost.

### Software Engineer

Firefly Integration | September 2019 - July 2021

- Very fluid, worked on multiple projects and products, such as embedded systems, internal tooling, and mobile apps. Mainly used JavaScript frameworks such as Angular and React. For the mobile apps we used JavaScript in Ionic.
- Responsible for general debugging, maintenance, cross-team collaboration, Android app releases, and hot fixes. Developed using Cordova, Angular, and SASS.
- Worked and communicated directly with multiple teams such as product, data entry, and quality assurance.
- Refactored existing integrations to increase efficiency and integration for new HVAC, lighting, slide, and tank systems for mobile app use.

### Web Developer

IUPUI Living Lab | January 2019 - May 2019

- Developed the new IUPUI Living Lab WordPress website. Responsible for layout, design, debugging, and functionality. Developed using Agile development, WordPress, JavaScript, HTML, and CSS.
- Responsible for debugging, quality control, reliability, layout, site functionality, and documentation.
- Rebuilt the Avon Christian Community website using WordPress and CSS.

## MY EDUCATION

Purdue School of Engineering and Technology, Indianapolis

Bachelor of Science, Major in Computer Information Technology (Web Development)

- CGPA: 3.65
- Graduated with Dean's List
- August 2016 - May 2019
